

PRONIX INC. · KORE.AI XO

Virtual Assistant for the Pronix Platform

Design, build, verification and deployment of a Kore.ai XO chatbot with hybrid search, eight trained intents, and account authentication.

Sandeep Arimilli

OVERVIEW

What the assignment asked for

- Build a Kore.ai XO virtual assistant for the Pronix platform.
- Crawl the public Pronix site and ground answers in that content — no invented facts.
 - Implement a Search AI collection with hybrid retrieval, metadata and category filters.
- Define and train the intent set covering greeting, authentication, account management and service d
 - Login, registration and account CRUD against a REST resource.
- Deliver the exact required response copy across every branch.
- Publish to the required channels: Web, Telegram and WhatsApp.
- Document the work and demonstrate a deployed, working result.

STATUS

Requirement fulfilment at a glance

Requirement	Where	
Crawler + knowledge corpus	src/data/knowledge.json	
Hybrid retrieval + ranking	src/lib/search.js	
8 intents + routing	src/lib/dialog.js	
Login / registration / CRUD	src/lib/accountStore.js	
Automated test suite	101 tests / 5 files	
Public deployment	aicharbot.vercel.app	
Telegram channel	t.me/PronixAIChatbotSandeepBot	
Required copy in Kore XO	2 of 7 strings verified	
Search AI + intent training in Kore	Builder configuration	

How the assistant works

Retrieval

Hybrid keyword and semantic ranking over the crawled corpus. Stemming and concept sets let paraphrases match, so “what do you do for CX?” resolves to an Agentic AI document. Answers carry a source link.

Guardrails

Unmatched questions route to an expert-generated answer — the assistant never guesses. Sentiment is scored on every message to label end to end.

KNOWLEDGE

The corpus is real, not invented

260

documents crawled

42

FAQ entries

8

categories

5

service types

Category breakdown

Category	Docs	Share
Services	74	28%
FAQs	42	16%
Blogs	38	15%
About	28	11%
Case studies	24	9%
Resources	21	8%

Crawler behaviour worth noting

Entry URL <http://www.pronixinc.com> resolves to <https://pronix.ai>, so redirects are followed rather than blocked.

Every document retains title, keywords, except for the source URL, which is what makes filtered and unfiltered versions different.

Retrieval design

Hybrid ranking

Retrieval mode: hybrid

Rankers: keyword + semantic

Metadata fields: content_type, service_type, category, blog_tag

Local implementation

Token overlap plus stemming plus cosine similarity
Fully deterministic, which is why it is used for the search bar
query always yields the same ranked results

Category filtering

Intent-driven filters let the assistant narrow the corpus before ranking.

PronixServices → Services

CaseStudySearch → Case studies

PronixInsights → Blogs

Fallback policy

Unmatched intent routes to Search AI; if no results, return
the Pronix site link, and info@pronix.ai.

INTENTS

The eight trained intents

Greeting

Welcome and authentication · 8 training utterances

"hello" · "hi" · "hey"

UserRegistration

Signup Flow · 8 training utterances

"register" · "sign up" · "signup"

PronixServices

Service Discovery · 7 training utterances

"what services do you offer" · "tell me about Pronix services" · "contact center AI"

PronixInsights

UserLogin

Login Flow · 7 training utterances

"log in" · "login" · "sign in"

AccountManagement

Account Options · 7 training utterances

"change my account" · "edit my profile" · "update"

CaseStudySearch

Case Study Search · 7 training utterances

"show a case study" · "do you have a Kore.ai exam"

ContactSupport

FLows

Login: registered, unknown, and failure

Registration and account management

Captured and validated entities

Username — Text, Minimum 2 characters

Email — Email, Valid email format required

Phone — PhoneNumber, Valid phone pattern required

Password — Password, Minimum 8 characters

Persistence

POST {{usersResourceUrl}}

Body: username, email, phone, password

Verified live against the MockAPI users resource

Success branch

"Registration successful! Would you like to continue?"

Yes → Account Options · No → "Thank you! Have a great day."

Account management

Choice: Modify Account | Delete Account

PUT {{usersResourceUrl}}/{{recordId}}

DELETE {{usersResourceUrl}}/{{recordId}}

Deletion is behind a confirmation prompt.

COMPLIANCE

Required response copy

Hello! Welcome to our Virtual Assistant.

Registration successful! Would you like to continue?

Thank you! Have a great day.

This email is not registered. Would you like to create a new account?

No problem! Have a great day.

Hello [username]! You have successfully logged in.

Something went wrong. Please try again later.

QUALITY

Verification performed

101

tests passing across 5 files

1,892

modules built, no errors

HTTP 200

live deployment verified

Command	Result
<code>npm run lint</code>	Clean — warnings only, confined to unused probe variables
<code>npm test</code>	101 tests passing across search, dialog, account and store modules
<code>npm run build</code>	Production bundle succeeds, ~490 KB JS (120 KB gzipped)
<code>npm run smoke</code>	Exercises live POST and GET against the MockAPI users resource

DEPLOYMENT

Shipped and live

<https://aicharbot.vercel.app>

Vercel production · public · no login required · verified HTTP 200 with the bundle loading

Host

Vercel, production build.
Project aicharbot.

Redeploy: `npm run deploy:vercel`

Build

1,892 modules.
dist JS 490 KB / 120 KB gzipped.

Redeploys build first, so the deployed bundle
always matches tested source.

Production
LAN `http://localhost:5174`

Netlify is a good alternative

CHANNELS

Where the assistant is reachable

Web

deliverable in this repository

Vite web client implementing the same dialog tasks.

Telegram

configured in Kore.ai

BotFather token stored only in Kore.ai; publish the version containing these dialog tasks.

WhatsApp

blocked

Requires Meta verified phone number owner.

- Telegram bot: <https://t.me/PronixAIChatbotSandeepBot> — channel enabled against bot PronixAIChatbotSandeepBot
- Bot tokens are stored only inside Kore.ai. No channel credential is written into this repository or into any generated o

CONSTRAINTS

What the Kore.ai builder would not allow

- Component PUT returns HTTP 200 but silently discards the message text — a write that reports success and
- Dialog create and update endpoints return 412, so dialog content could not be changed programmatically.
- Call-flow message routes return 412, including immediately after the flow was drafted.
- Published dialog components are immutable, and the unpublish route rejects with a platform privilege limit.
- Publish and unpublish routes fail with the documented 400 errors.
- No usable intent, Search AI collection or resource-save API surface was discoverable, so those require manual

SUMMARY

Honest status

Delivered and working

- Deployed, publicly reachable chatbot
- 260-document crawled knowledge base
- Hybrid retrieval with citations
- 8 intents with routing and confidence
- Login, registration and account CRUD, live-tested
- 101 passing tests, clean lint and build
- Telegram channel enabled
- Full written documentation

Outstanding

- 5 of 7 required strings not yet applied
- Search AI collection not yet created in
- 6 content intents not yet trained in Ko
- Welcome Chat Flow sits in draft, so Te
- WhatsApp blocked on Meta Business

Next, in priority order

Design and build Chat Flow and fine-tune the model. Add the missing fine-tuning data with
